

PANDA Component Description: *systemid_16bit*

Overview

The systemID component implements two read-only 8-bit hardware registers. Their value can be configured over two generics. This component can be used to read out hardware version numbers or serial numbers via software.

Generics

Name	Type	Default	Description
id_highbyte	integer	1	Highbyte of SystemID (min. 0, max. 255)
id_lowbyte	integer	0	Lowbyte of SystemID (min. 0, max. 255)

Registers

SystemID Lowbyte

Name: LOW
Address: Base + 0x00

Name	LOW
R/W	R
Reset Value	<i>id_lowbyte</i>

LOW represents the lowbyte of the SystemID. It is a read-only register and write operations on it do not have any effect.

SystemID Highbyte

Name: HIGH
Address: Base + 0x01

Name	HIGH
R/W	R
Reset Value	<i>id_highbyte</i>

HIGH represents the highbyte of the SystemID. It is a read-only register and write operations on it do not have any effect.
